DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2-10, 15 and 18-21, drawn to a transflective liquid crystal display having a liquid crystal layer of variable thickness, classified in class 349, subclass 113.
- II. Claims 11-14, 16 and 17, drawn to a method of manufacturing a liquid crystal display, classified in class 438, subclass 30.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the method of Invention II can be used to make a liquid crystal display having a liquid crystal layer that is not variable in thickness either within a single pixel or from one pixel to another.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
